

# SMD Common Mode Inductor Size 6536

Chip common mode filter for large current applications.  
 Low profile design makes it optimal for surface mounting.  
 Operating temperature -40~+105  
 Quantity: 2500PCS

Power line noise countermeasure for various electronic equipment  
 Noise countermeasure for adapter lines and battery lines or larger  
 electronic equipment such as note PCs and word processors

## Dimensions: [mm]

## Schematic:

## Land Pattern: [mm]

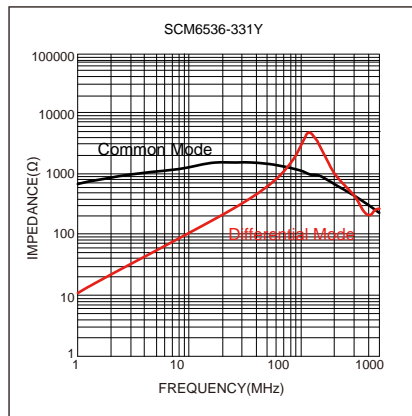

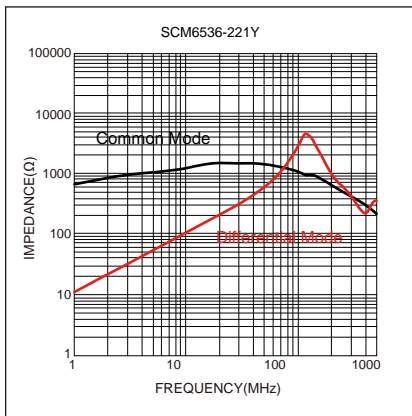

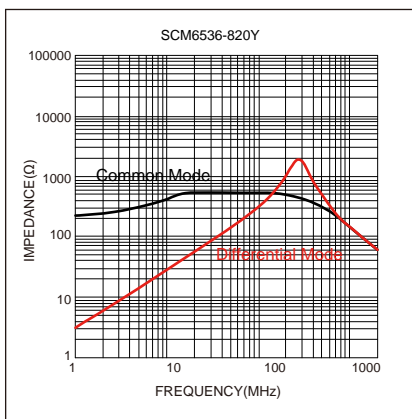

## Electrical Properties:

Part No	Inductance @ 10KHz/0.1V ±50% ( $\mu$ H) 1-4=2-3	Leakage Inductance @1MHz/1mA Typ. (nH) 1-4(2-3 short)	DC Resistance Max. ( $\Omega$ ) 1-4=2-3	Rated Current Max. (A)	Rated Voltage Typ. (V)	Impedance Typ. ( $\Omega$ )	Hi-Pot (Vdc) 3mA/1S 1,4-2,3

Temperature Rise Current: The actual value of DC current when the temperature rise is  $T=40^{\circ}\text{C}$

# Typical Electrical Characteristics:

Peel force of top cover tape:

Reel Dimension : [mm]

Packaging Quantity:

## Cautions and Warnings:

### Storage Conditions :

- The storage period is within 12 months after the completion of production. Be sure to follow the storage conditions (temperature: -5 to 35°C, humidity: 75% RH Max). If the storage period elapses, the soldering of the terminal electrodes may deteriorate. The warranty period is one year.
- Product should not be exposed to environment with high temperature, high humidity, dust, corrosive gas and etc.
- Products should be handled with care to avoid damage or contamination from perspiration and skin oils.
- Please always handle products carefully to prevent any damage caused by dropping down or inappropriate removing.

### Operation Instructions:

- Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design.
- Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperature does not exceed 150°C.
- Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.
- Generally, Koher might not be familiar with either customer's specific application or actual requests as customer does. As a result customer shall be responsible for checking and confirming whether Koher product with the performance described in the product specification is suitable for using in customer's particular application or not.

### Conformal coating:

- The inductance value may change due to the high cure stress of the resin used for coating or molding.
- An open circuit may occur due to mechanical stress from the resin, its amount, cured shape, or operating conditions.
- Please exercise careful attention when selecting a resin for the coating or molding process.
- Prior to using the coating resin, please verify that no reliability issues are observed.
- When applying conformal coating for product protection, materials with a high shrinkage rate should be avoided. If such materials must be used, it is recommended to apply silicone around the inductor core in a closed loop to prevent the conformal coating from flowing into or penetrating the windings, thereby avoiding open-circuit failures caused by the coating's thermal stress.
